

The JERID Company was originated in 1993 through the initiative and collaboration of a number of skilled railway and computer experts. We deal with the processing and provision of information in the railway cargo area by our information systems. The JERID Company became a Microsoft Certified Partner in August 2005.

Pavel Kubat worked for us from March 2003 till September 2005 on a part time. During this time we developed some information systems (each for different purpose) and Pavel Kubat developed these systems in a development team.

Our company has developed the applications from the second half of 2002 in C# and .NET Framework, most of our ISs use MS SQL Server databases and we are using UML and Enterprise Architect (from the Sparx Systems company) for analyses.

Pavel Kubat's knowledges of C#, NET Framework, UML and MS SQL Server are really wide and a cooperation with him was excellent. I have been satisfied.

He cooperated on developing this applications:

| Period | Name of project | Description | Modules/Functions |
|-----------------|-----------------|---|--|
| 3/2003 – 9/2003 | MANA | 'Forwarder's MIS | Data Conversion, Overviews |
| 10/2003– 9/2005 | NEWSPED | Information system for railway forwarding agents and forwarders | Requirements, Offers, Overviews and Statistics |

Olomouc, 6.9.2005
